

Different than a Nipple Shield

The **Neotech Bridge** is not a nipple shield. It's a one-of-kind delivery system with a built-in feeding tube for newborns to receive supplementation at the breast. The Bridge features a uniquely thin nipple cover that fits differently than a standard nipple shield to accommodate a variety of breast and nipple sizes.

The Bridge features a taller nipple with a more gradual taper to offer more options for depth of latch. While the base is 23.8mm, the tip is narrower than a 16mm shield.

SIZE COMPARISON: Neotech Bridge compared to popular nipple shields.
